MOISTURE

Keeps the compost pile damp enough for microbes to stay active and break materials down.

CARBON

Provides the energy source that fuels decomposition and balances wetter, nitrogen-rich scraps.

DECOMPOSER

From microbes to invertebrates, this hero does the actual work of breaking everything into finished compost.

NITROGEN

Supplies the protein and nutrients microbes need to grow and speed up the composting process.

AIRFLOW

Delivers oxygen, preventing rot and odors while keeping decomposition hot and efficient.

DISCARD PILE

DRAW PILE

ONGOING ACTION CARD

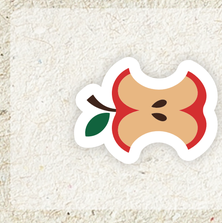
ON YOUR TURN

1. Draw 1 Card (Follow the instructions in the yellow area when played)
2. Play 1 Compost Hero
3. Play 1 Action Card (optional)
4. End of turn, discard down to 5

CARD EFFECTS

IMMEDIATE

ONGOING



AIRFLOW

Delivers oxygen, preventing rot and odors while keeping decomposition hot and efficient.

NITROGEN

Supplies the protein and nutrients microbes need to grow and speed up the composting process.

DECOMPOSER

From microbes to invertebrates, this hero does the actual work of breaking everything into finished compost.

CARBON

Provides the energy source that fuels decomposition and balances wetter, nitrogen-rich scraps.

MOISTURE

Keeps the compost pile damp enough for microbes to stay active and break materials down.

THE CHALLENGE

Be the first to build a compost pile by adding at least one compost hero to each of the 5 layers.
First to finish says **'I'm a Compost Hero!'**

MOISTURE

Keeps the compost pile damp enough for microbes to stay active and break materials down.

CARBON

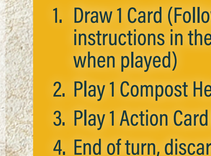
Provides the energy source that fuels decomposition and balances wetter, nitrogen-rich scraps.

DECOMPOSER

From microbes to invertebrates, this hero does the actual work of breaking everything into finished compost.

NITROGEN

Supplies the protein and nutrients microbes need to grow and speed up the composting process.



AIRFLOW

Delivers oxygen, preventing rot and odors while keeping decomposition hot and efficient.
